

Data Collection and Preprocessing Phase

Date	28 Aug 2026
Team ID	Girish Pol
Project Title	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	2 Marks

Data Collection Plan and Raw Data Sources Identified

The data collection process was designed to obtain **structured information about the use and adoption of Artificial Intelligence in the education sector across different countries and communities**. The collected dataset contains information related to **student AI usage, teacher AI usage, school AI adoption, adoption levels, countries, urban and rural communities, and yearly AI usage trends from 2015 to 2026**. This data was used to analyze global AI adoption patterns, compare AI usage across different countries, and understand the growth of AI in education over time.

The raw dataset consists of structured records containing **country-level and community-level information related to AI usage in education**. Key attributes include **country, year, student AI usage, teacher AI usage, school AI adoption, AI adoption level, and urban/rural classification**. These variables were used to create the Tableau visualizations and story points for analyzing global AI adoption trends in education.

Section	Description
Project Overview	AI in Education Analysis is a Business Intelligence and data visualization project developed using Tableau Public. The main objective is to analyze AI adoption and usage in education and transform raw data into meaningful visualizations, interactive dashboards, and a Tableau Story.

Data Collection Plan	Structured AI education records from 2015–2026 were collected and organized in a tabular dataset. The dataset includes information such as Country, Year, Student AI Usage, Teacher AI Usage, School AI Adoption, AI Adoption Level, and Urban/Rural Classification .
Raw Data Sources Identified	The primary raw data source is the AI in Education dataset used for this project. It serves as the main analytical source for the Tableau worksheets, calculations, filters, dashboards, and Story.
Section	Description
Data Collection Method	The dataset was obtained in a structured CSV/tabular format and examined for data completeness, consistency, duplicate records, appropriate data types, and categorical values before visualization.
Data Preparation	After collection, the dataset was explored and prepared for Tableau analysis. Relevant fields such as Country, Year, Student AI Usage, Teacher AI Usage, School AI Adoption, Adoption Level, and Urban/Rural Classification were organized and used to create the project's visualizations and dashboards.

Main Dataset Fields

The raw dataset contains several fields used during the analysis, including:

- **Country**
- **Year**
- **Student AI Usage (%)**
- **Teacher AI Usage (%)**
- **School AI Adoption (%)**
- **AI Adoption Level**
- **Community Type (Urban/Rural)**
- **AI Usage Growth (%)**
- **Student Adoption Rate**
- **Teacher Adoption Rate**
- **School Adoption Rate**

The collected dataset provided sufficient information to perform the planned Business Intelligence analysis. After data-quality checks and preprocessing, the dataset was connected to **Tableau Public** and used to develop the project's **worksheets, KPI visualizations, interactive dashboards, and Tableau Story**. The analysis focuses on AI usage and adoption in education across different countries, years, and communities.
