Project Title	Global AI Adoption in Education: A Comprehensive Global Performance Intelligence Report
Maximum Marks	3 Marks

Data Quality Report

The Data Quality Report summarizes the major quality checks performed on the **AI in Education 2015–2026 dataset** before visualization. The purpose of this process was to identify potential **missing values, duplicate records, inconsistent categories, incorrect data types, and data-format issues**, ensuring that the dataset was reliable and suitable for accurate analysis and visualization in **Tableau Public**..

Data Source	Data Quality Issue	Severity	Resolution Plan
AI in Education 2015–2026 Dataset	Missing or Blank Values: Some fields may contain missing or incomplete values that can affect AI usage and adoption calculations..	Moderate	Review important fields such as Country, Year, Student AI Usage, Teacher AI Usage, School AI Adoption, and AI Adoption Level . Handle incomplete records appropriately before analysis..
AI in Education 2015–2026 Dataset	Duplicate Records: Repeated records may result in incorrect counts and inaccurate AI adoption analysis.	Moderate	Check the dataset for duplicate records and remove or account for repeated entries before performing calculations and creating visualizations.

AI in Education 2015–2026 Dataset	Inconsistent Categorical Values: Variations in values such as Country, AI Adoption Level, and Community Type can cause incorrect grouping and comparisons.	Moderate	Standardize category names and formatting so that similar values are grouped consistently in Tableau.
Data Source	Data Quality Issue	Severity	Resolution Plan
AI in Education 2015–2026 Dataset	Inconsistent Text Formatting: Extra spaces, different capitalization, or inconsistent text formatting may occur in categorical fields.	Low	Remove unnecessary spaces and standardize text formatting to ensure identical categories are recognized and grouped correctly.
AI in Education 2015–2026 Dataset	Data Type Inconsistency: Numerical fields such as Student AI Usage, Teacher AI Usage, School AI Adoption, and AI Usage Growth must be correctly recognized by Tableau.	Moderate	Validate the data types and convert numerical attributes into appropriate numeric measures before creating calculations and visualizations.
AI in Education 2015–2026 Dataset	AI Usage Data Validation: AI usage and adoption percentage values need to be within appropriate ranges for accurate comparison and aggregation.	Moderate	Review usage and adoption fields and validate their values before applying SUM, AVG, and other calculations in Tableau.
AI in Education 2015–2026 Dataset	Time Field Consistency: The Year field must be correctly interpreted for analyzing AI adoption trends from 2015 to 2026.	Low	Validate the Year field and ensure it is correctly recognized in Tableau for time-based analysis and trend visualizations.
AI in Education 2015–2026 Dataset	Country Field Handling: Country names must remain consistent to avoid incorrect country-wise comparisons.	Low	Standardize country names and use Country as a geographic dimension in Tableau for accurate map and comparison visualizations.
AI in Education 2015–2026 Dataset	Adoption Level Classification: Categories such as High, Moderate, and Low AI Adoption need consistent classification.	Low	Maintain consistent adoption-level categories when creating the AI Adoption Level Breakdown visualization and related analysis.

Overall Data Quality Assessment

The dataset was reviewed for **completeness, consistency, appropriate data types, duplicate records, and categorical standardization**. These checks helped ensure that **AI usage, adoption levels, country comparisons, yearly trends, and urban-rural analysis** produced meaningful and reliable results.

After completing the required data-quality checks and preprocessing activities, the dataset was prepared for further **data exploration, visualization, dashboard development, and Tableau Story creation**.
